# “GETTING READY FOR YOUR WRITTEN HEALTHCARE INTERPRETER CERTIFICATION EXAM”

A 20-HOUR INTENSIVE TRAINING BY CCCS

## Certification Preparation:

Please note that this course was designed to prepare interpreters for both written certification exams. However, students who already have passed the certification exam may want to use this course for Continuing Education Credits, and at the same time review important medical information.

Currently there are two organizations that are presently offering national certification for healthcare interpreters. This is an exciting time for healthcare interpreters and many are looking to take advantage of the benefits that certification offers.

## Prerequisites for the written component:

- This course is only available for active healthcare interpreters who have received at least 40 hrs of interpreter training.

## Course fees:

- \$199.00 tuition
- \$10.00 application

After an applicant has been accepted to the course, they will have to register online in order to take the diagnostic pre-quiz. This quiz will help identify areas of needed improvement, as are indicated by a score of 80% or lower. This information will later be shared with the student. The student may then choose focus on these areas during the course.

## Description of Training:

This course will help prepare active qualified healthcare interpreters for both of the national certification written exams. In order to simulate the written certification exams, students will have the opportunity to take online tests. This course will help prepare the student to get the feel of how the certification exam will be presented and will allow them to receive instant feedback on their progress. Students will be able to use these exams as a tool to help gauge their progress, and as an indicator to help them determine their readiness for the certification exam.

The American Translators Association has approved this training program for 3 Continuing Education Points, and by the International Medical Interpreters Association (IMIA) for 2 Continuing Education Units.

## This review course will focus on four main modules:

- Test Taking Techniques
- Interpreting Standards
- Medical Terminology
- Review of 11 Main Body Systems
